

Commencement of Public Business

- [illegible]

- $\frac{1}{2} \times \frac{1}{3} = \frac{1}{6}$ (the product of two fractions is a fraction)
- $\frac{1}{2} \times \frac{1}{2} = \frac{1}{4}$ (the product of two fractions is a fraction)
- $\frac{1}{2} \times \frac{1}{4} = \frac{1}{8}$ (the product of two fractions is a fraction)
- $\frac{1}{2} \times \frac{1}{8} = \frac{1}{16}$ (the product of two fractions is a fraction)

Questions for Oral Answers

1. $\frac{1}{2} \times \frac{1}{3} = \frac{1}{6}$ - the product of two fractions is a fraction
2. $\frac{1}{2} \times \frac{1}{2} = \frac{1}{4}$ - the product of two fractions is a fraction
3. $\frac{1}{2} \times \frac{1}{4} = \frac{1}{8}$ - the product of two fractions is a fraction
4. $\frac{1}{2} \times \frac{1}{8} = \frac{1}{16}$ - the product of two fractions is a fraction
5. $\frac{1}{2} \times \frac{1}{16} = \frac{1}{32}$ - the product of two fractions is a fraction
6. $\frac{1}{2} \times \frac{1}{32} = \frac{1}{64}$ - the product of two fractions is a fraction
7. $\frac{1}{2} \times \frac{1}{64} = \frac{1}{128}$ - the product of two fractions is a fraction
8. $\frac{1}{2} \times \frac{1}{128} = \frac{1}{256}$ - the product of two fractions is a fraction
9. $\frac{1}{2} \times \frac{1}{256} = \frac{1}{512}$ - the product of two fractions is a fraction
10. $\frac{1}{2} \times \frac{1}{512} = \frac{1}{1024}$ - the product of two fractions is a fraction

$\frac{1}{2} \times \frac{1}{1024} = \frac{1}{2048}$ - $\frac{1}{2048}$
